

Group Study App

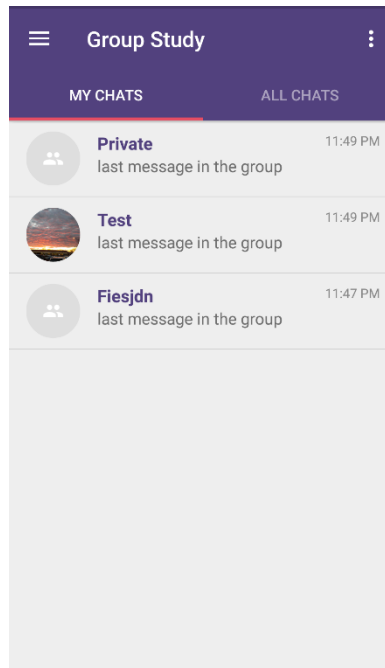

This is an Android chat app named “Group Study”. The zip file includes:

1. APK folder of the App last version. You can install and run it on your device or on an emulator.
2. App Print Screen folder. It has pictures of all the app features in each sprint that I did.
3. Group Study APP. It has the actual code of the App
4. Project Notebook. It has the documentation report of the App for each sprint.

Also, you can find the app on my GitHub account [HERE](#). To run this App, you need to connect to my database “Firebase”. In order to do that I must add your “SHA1” to my Firebase account to make it work. So, you can take look to the code and install the APK file and run it to enjoy the App.

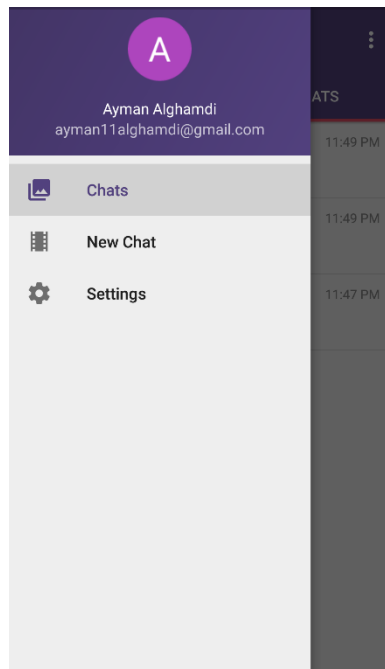

After installing the App, you need to sign in using a Gmail account (1-1). Then, you will see the main screen of the App (1-2).

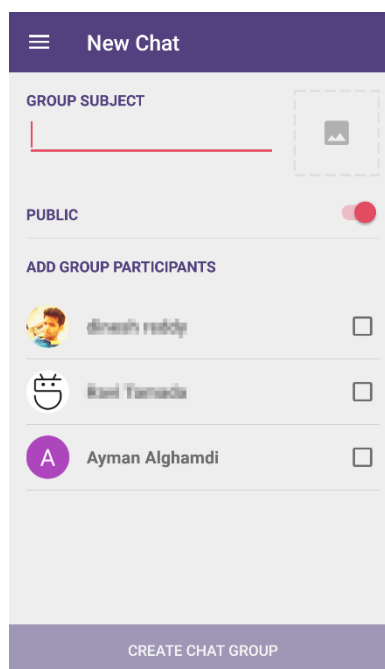

(1-2)

In this screen, there are to tap “My chats” and “All Chats”. My Chats groups list contain all groups that you are a member either private or public groups. In the other hand, All Chats groups list contain All groups that were created as public groups either you are a member or not on these groups. In other ward, if you created a “Public” group, it will be in “All Chats” list and all the app member can see and join it without your permission. While if you created a “Private” group, it will be listed on “My Chats” groups list and it will be seen just by that group’s members.

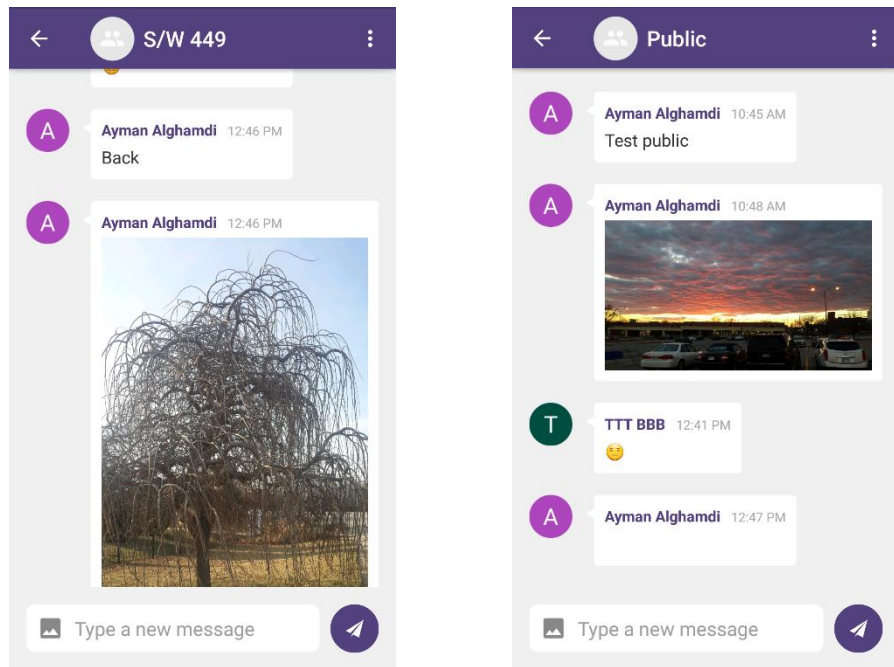

(1-3)

To create a group, just tap on the side menu on the top left and choose “New Chat” (1-3). Then you need to fill the group information as shown in (1-4) and tap on “Create chat group”.

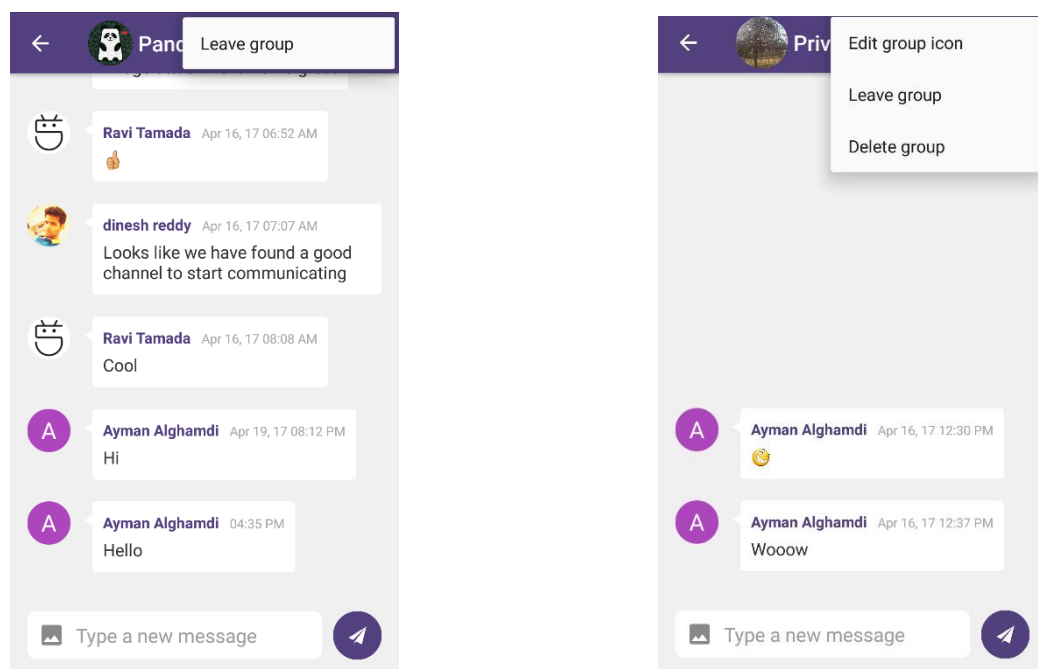

(1-4)

In the group chat, you can communicate with the group members and share pictures (1-5).

(1-5)

You can leave a group if you are a member(1-6) also you can delete a group or edit group icon if you are the admin of it (1-7). Enjoy the App 😊
